**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-13 & 15-27, drawn to electronic digital logic circuitry, classified in class 326, subclass 95.
  - II. Claims 11-14, drawn to system configuration/timing, classified in class 713, subclass 167.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the method and apparatus of the logic latch circuit is not intended to be used together with the computer program product comprising computer program codes. The group I recites a method and apparatus for implementing a logic circuit whereas the group II recites a computer product having a medium with a computer program embodied thereon. Both groups have different modes of operation.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
4. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
